The Control Layer for
Accelerated Enterprise AI Transformation

Every AI request is a decision...nobody is effectively managing these decisions today

Financial Bleed (CFO)

Costs are compounding.
Teams default to oversized models. ~30% of spend is wasted

Invisible Risk (CRO, Legal/Compliance)

Shadow AI is spreading.
Proprietary data hits unvetted models. No control, no audit trail

Operational Complexity (CIO/CTO)

Fragmented AI stack. No orchestration layer.
Scaling increases cost and complexity

The Market Opportunity: a **\$4.5B** inefficiency hiding in a **\$15B** and growing AI Spend

1. The Baseline (OECD)

~50k **mid-market** firms actively deploying AI (~\$50M–\$1B revenue, non-tech sectors)

2. The Spend (Gartner)

~\$300k average annual AI spend per firm: **~\$15B total AI consumption**

3. The Opportunity (BCG)

Estimated 30% unmanaged inefficiency and leakage.
\$4.5B Addressable Opportunity.

Enterprises intend to scale AI innovation, and instead end up scaling blank-cheque liability...this is our opportunity

Making AI decisions **optimal** and **auditable** by default

The RightSize AI Solution and Revenue Model

The RightSize AI Orchestrator

- Routes each request to the **right model** (cost vs performance)
- Optimises execution (**when, where, how**)
- Enforces **policy, compliance, and auditability**

The Outcome

- **Lower cost** per AI task (5–20x where over-specified)
- Full **visibility, auditability** and **compliance**
- Vendor neutral, **Scalable AI** without loss of control

The Revenue Model*

Option 1: Usage-Based

Best for: high-volume, cost-sensitive workloads
→ maximises alignment to savings

Option 2: Subscription

Best for: governance-led buyers (risk, compliance)
→ prioritises predictability and control

**to be validated*

Our team has **built, scaled, governed, and financed** complex systems at global scale

Etay Zwick

Attuned Futures

Connects frontier technology to real enterprise investment decisions

Alex Paterson

Cisco Systems

Turns complex AI systems into measurable, controllable operations.

David Mindham

EDP Renewables

Prices risk and constraints in systems where inefficiency is costly

Ravikumaran Govender

Momentum Group Ltd

Builds governed, scalable AI systems inside complex financial institutions

Guillaume Ehinger

Google

Runs AI systems where performance, cost, and security all matter at planetary scale
